The main reason I got rid of the graphics-intensive programs I was using previously was because I simply didn't have the time or energy to learn how to use them. I could spend an hour learning to use Gimp, only to have my photos mangled by the time I was done using it. Bonus: New features for Advanced Photoshop users now available! Instead of having to pay monthly fees for PS, you can use over 50% of all the features that Professional and CS7 owners have enjoyed. The cost of the upgrade is much cheaper than it once was. Photoshop Elements now runs in 16-bit (true color) mode and is as fast as the professional software. This is a benefit to photos and videos shot on a camera that captures true color images (as opposed to over-saturated monochrome images). With all their fancy filters, Photoshop Elements allows you to adjust a color image to how it would look on a computer monitor. And I mean ALL of the features CS7 had that aren't part of PSE, I wasted months getting my dip-pen art to do what it needed to do, and it was so much easier to use. There are so many features that have been built into professional programs and can be done incredibly fast using the new PSE. For example, if you look at the X-Factor effect, you'll notice how you can tick lots of boxes easily. It seems like a lengthy process in Photoshop CS, but it just takes a matter of seconds to do it in PSE. 1. Open PSHE between Photoshop and Adobe Lightroom (as I did with the previous version). 2. Open PSHE in Adobe Photoshop. 3. Click on File > Convert to PSD. 4. That's it. PSHE saves as a Photoshop CSO file and you've got basic layers, blend modes, filters and everything else. 5. Save the PSHE file as a new PSD file as much as you want, aka. how much you want to tweak. 6. Done.
